Adi Tauqir

Atlanta, GA | 770-524-3864 | aditauqir@gmail.com | linkedin.com/in/aditauqir | aditauqir.vercel.app/ | Green Card Holder

Education

Georgia State University — Atlanta, GA

B.S. in Computer Science | GPA: 4.25 — *Expected May. 2027*

- M.S. in Computer Science, dual degree track | GPA: 4.00; expected Dec 2027.
- President's List: Fall 2024 – Summer 2026 | Relevant Coursework: Data Structures, Design & Analysis of Algorithms, System-Level Programming, Software Development, Computer Organization & Programming, Mobile App Development, Linear Algebra, Probability & Statistics, Cloud Computing, Data Mining, Agentic AI Systems

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, C/C++, Swift, SQL, HTML/CSS, Kotlin, Flutter, Bash/Shell
Software Engineering: React, Next.js, Three.js, Node.js, FastAPI, SwiftUI, REST APIs, WebSockets, OOP, Data Structures & Algorithms, Unit Testing, Regression Testing, Debugging, Performance Optimization
Data & AI: PyTorch, TensorFlow, Pandas, NumPy, Machine Learning, Feature Engineering, Model Evaluation, Generative AI, RAG, AI Agents, Workflow Automation
Infrastructure & Tools: PostgreSQL, Supabase, SQLite, Redis, Docker, Linux, AWS EC2, Azure, Git, GitHub Actions, Tailscale, CI/CD, Cursor, Codex, Claude Code, Kiro, Deepseek, LLama

Professional Experience

DataAnnotation — Remote

Software Validation & AI Training Specialist (Independent Contractor) — *Oct. 2026 – Present*

- Write, execute, and review Python, JavaScript, and TypeScript code tasks to train and validate AI models; assess correctness, edge-case handling, code quality, and instruction-following against explicit acceptance criteria.
- Apply RLHF-style evaluation by engineering targeted prompts, varying task parameters, ranking model outputs, and delivering structured feedback on reasoning, truthfulness, safety, harmlessness, and policy adherence.
- Adversarially test models with ambiguous requirements, malformed inputs, hidden edge cases, and safety-sensitive scenarios; reproduce failures, isolate root causes, and convert findings into actionable remediation guidance and regression tests.
- Perform quality assurance on analyst prompts, feedback, conversations, and assessments; calibrate reviewers and refine validation rubrics so model behavior can be evaluated consistently across versions and task types.

Technical Projects

Zirn (Zehan) – Local-First AI Writing Workspace | *Swift, SwiftUI, macOS, Mistral, Sparkle* — Aug. 2026 – Present

- Built a local-first macOS writing and knowledge workspace in Swift and SwiftUI with file-backed notes, stable document links, brain-vault organization, and integrated Mistral AI assistance.
- Designed native document workflows around durable local state, searchable knowledge organization, model configuration, and OCR-assisted PDF workflows, keeping the product useful without a hosted backend.
- Built production delivery infrastructure with Xcode, scripted packaging, Developer ID signing, notarized DMG distribution, and Sparkle OTA updates; the public repository contains 100+ commits and a complete install path.

Swarm Alignment Research – Multi-Agent Oversight & Neuron Steering | *TransformerLens, Gemma-2-2B, Qwen, HMAC* — Nov. 2026

- Engineered an oversight harness for multi-agent LLM swarms against forging adversaries: HMAC-signed inter-agent messages surfacing forgeries as [UNVERIFIED], hash-chained private notes flagging edits as [TAMPERED], and a say-versus-do monitor scoring stated intent against an agent-independent execution trace.
- Ran real-LLM-agent A/B experiments (Qwen 35B, 10-agent games) where signing flagged 4/4 forged messages with 0/578 false flags and the monitor caught every liar from logs alone with zero false positives; scripted three-branch demos verified tamper detection end-to-end.
- Performed activation steering on Gemma-2-2B: located obedience-direction features in the residual stream, amplified them during decoding to raise compliance with forged authority messages, and visualized internal signal flow in an interactive 3D interface.

FYouTube Premium – Runtime Compatibility Layer | *JavaScript, WebKit, Browser APIs, GitHub Actions* — Aug. 2026 – Present

- Built and maintained an iPhone-focused YouTube extension for Orion/WebKit, Chrome, and Firefox that transforms desktop YouTube into a mobile-friendly experience with background playback, inline video, search, navigation, and ad blocking; shipped 16+ features across 70 commits.
- Handled asynchronous DOM mutations, playback-state races, navigation changes, browser API differences, and upstream UI breakage with event-driven JavaScript and defensive state management.
- Added regression checks, browser-specific packaging, version validation, GitHub Actions CI/CD, and release automation; used real-device reports and a Chromium diagnostics workbench to reproduce upstream failures and iterate on reliability and performance.

Leadership & Achievements

HackHers – Best Use of Gemini Award (Mosaic) | *Gemini API, Agentic AI, SwiftUI* — Sept. 2026

- Built an agentic financial assistant that orchestrated multi-step Gemini workflows and context harnesses for messy financial data.

Truist CT Hackathon – 1st Place Winner, Team Lead | *CTF, Wireshark, Burp Suite, Python* — Nov. 2026

- Led the team to 1st place by capturing the most flags of any team, solving web exploitation, network forensics, and reverse-engineering challenges under time pressure.
